

Introduction to Web Scraping Using Python

Dr. Olga Scrivner

Cyberinfrastructure for Network Science Center

In this workshop, you will learn how to extract web data with Beautiful Soup, a Python library for extracting data out of HTML- and XML-structured documents. You will also learn the basics of scraping and parsing data. In this hands-on workshop, we will also be using the DataCamp platform and participants are requested to have a free account with DataCamp (www.datacamp.com) prior the workshop. This workshop is

open to anyone, and previous knowledge of Python is not required.

This workshop is offered in collaboration with the Indiana Intensive Didactic Seminar.

Friday, February 23, 2018, 2-4pm
