

Introduction and Rationale for Using NSSE in Accreditation

One of the most common institutional uses of NSSE data is for accreditation. In fact, NSSE schools report that accrediting agencies are the primary external group with which they share NSSE results.

In June 2012, the American Council on Education (ACE) National Task Force on Institutional Accreditation released a report urging the higher education community to strengthen and improve the quality and public accountability of the institutional accreditation process.

“Voluntary accreditation has served higher education extremely well for more than a century. However, the ACE Board of Directors urged the creation of this task force so we could share with the academic community an assessment of the value of voluntary peer review in light of wide-ranging changes in the higher education landscape.”

—Molly Corbett Broad, President
American Council on Education

Assuring Academic Quality in the 21st Century: Self-Regulation in a New Era is designed to spark productive conversations throughout the higher education community to address the challenges of strengthening the system of voluntary self-regulation.

The report describes current approaches to accreditation, addresses criticisms of the process, and offers six recommendations colleges, universities, and regional accrediting bodies can implement to ensure that the accreditation process is a meaningful guarantor of academic quality. The recommendations are:

1. Increase the transparency of accreditation and clearly communicate its results;
2. Increase the centrality of evidence about student success and educational quality;
3. Take prompt, strong, and public action against substandard institutions; and
4. Adopt a more “risk-sensitive” approach to regional accreditation.

5. Seek common terminology, promote cooperation, and expand participation.
6. Enhance the cost-effectiveness of accreditation.

The second recommendation’s emphasis on evidence is particularly noteworthy. In response to the growing demand for public accountability, regional accrediting bodies now consider graduation and retention rates, student experiences and learning outcomes, supportive institutional resources, and placement data to be part of a standard comprehensive review that is made public. However, the report highlights the need to ensure these metrics are explained and qualified within the institution’s unique context so as to present a meaningful interpretation. Moreover, evidence must be sensitive to the institution’s mission and the characteristics of entering students and should reflect the educational benefits the institution seeks to provide. Finally, evidence of educational outcomes must be presented systematically and transparently. View the full report on the ACE website. www.acenet.edu

NSSE results are meaningful indicators of educational quality and can be used in planning as well as for documenting institutional effectiveness, guiding improvements, and assessing their impact. NSSE data show the levels of engagement of various types of students in effective educational practices during their first and last years of college. Thus, NSSE results are a direct indicator of what students put into their education and an indirect indicator of what they get out of it.

Institutional Examples	8

NSSE results help answer key questions related to institutional policies and programs associated with high levels of student engagement and learning. Regional and discipline- or program-specific accreditation standards have tended to encourage institutions to focus on self-evaluation and formative reviews that guide improvement efforts. So, rather than fashion self-studies as a stand-alone document for one-time use, these standards have begun to feature more elements of strategic planning and program evaluation that can be used to identify areas in which institutions wish to improve.

NSSE results are especially valuable for this purpose because they are actionable. That is, NSSE data point to aspects of student and institutional performance that institutions can do something about related to the curriculum, pedagogy, instructional emphases, and campus climate. In addition, because NSSE benchmarks allow a school to compare itself to others, the results often point to areas where improvement may be desired.

Specific applications of student engagement information for accreditation range from minimal use, such as including the results in a self-study appendix, to systematically incorporating results over several years to demonstrate the impact of improvement initiatives on student behavior and the efficacy of modifications of policies and practices.

NSSE 2017 and Updated Survey Items

After years of evidence-based and collaborative testing, the updated NSSE survey was administered for the first time in spring 2013. While survey changes range from minor adjustments to entirely new content, the updated instrument maintains NSSE's signature focus on diagnostic and actionable information related to effective educational practice.

How Will Comparisons with Prior-Year Results Be Affected?

Even the best surveys must be periodically revised and updated, affecting multi-year analyses such as trend studies or pre/post designs. Although many NSSE survey items remain unchanged, others have been modified and a few have been dropped, limiting longitudinal comparability of individual questions and historical benchmarks. While some new results will not be directly comparable to past results, institutions will still be able to evaluate longitudinal questions with the updated NSSE. For instance, if previous comparison group results indicate above-average performance in a particular area, institutions will still be able to gauge whether they outperform the same or a similar comparison group.

We are confident that the updated version will enhance NSSE's value to institutions. Furthermore, NSSE will continue to provide useful resources and work with participating institutions to ensure maximum benefit from survey participation.

NSSE as a Tool for Documenting Student Learning Outcomes

Here are several examples of how student engagement information links to accreditation goals related to documenting student learning processes and outcomes:

- NSSE is a national survey that helps institutions measure their effectiveness in key areas of interest.
- Used systematically over time, NSSE provides data that illustrate (a) that a college or university is using assessment to determine the extent to which it is meeting its educational objectives; (b) whether current institutional goals remain appropriate; and (c) if various areas of teaching and learning need improvement.
- Institutions can benchmark their performance against select peer comparison groups, their Carnegie classification category, and NSSE national norms.
- Information about student engagement and institutional effectiveness provides evidence of efforts to meet accrediting standards and continuously improve.
- NSSE results can yield insights into widely held assumptions about the nature of students and how they use the institution's resources for learning.
- Student engagement results are intuitively accessible and understandable by different groups of stakeholders, on and off campus.

This toolkit provides suggestions for incorporating NSSE into regional accreditation processes and products, with an emphasis on mapping student engagement results to regional accreditation standards.

NSSE and Regional Accreditation Timelines

NSSE results can be used in all components of the institutional accreditation process. These include but are not limited to:

- (a) the self-study that responds to evaluation criteria established by the accrediting body;
- (b) the visit by the team of peer evaluators who consider additional evidence; and
- (c) the response to a decision by an accreditation body requesting an improvement plan or additional evidence of student learning and related areas.

When and how often to collect and integrate student engagement data in the accreditation process are decisions facing all colleges and universities. The answers will vary, depending on several factors. Some schools want to collect student engagement information to establish a baseline. Ideally, this is done three to five years before preparing the self-study. This way, the institution has enough time to analyze, interpret, and disseminate the results to appropriate audiences, identify areas for improvement, take action in these areas, and administer the survey in subsequent years to demonstrate whether student and institutional performance are moving in the desired direction.

Other institutions will establish different timelines to meet their self-study objectives. For this reason, some schools administer NSSE on an annual or biennial basis. The appropriate NSSE participation cycle for your school depends on how you intend to use your data. Many institutions have found it valuable to have several years of NSSE results to establish a reliable baseline of data. Then, institutions assess their students every few years to allow time for institutional changes to take effect. This planned administration cycle maximizes the use of student engagement data for most accreditation purposes.

A substantial number of schools have gathered student engagement information multiple times, suggesting they may be comparing the results over time to estimate areas

in which student performance is changing. It may also indicate that some of these colleges are carefully monitoring trends in student learning processes over time to make certain that institutional performance remains at the desired level. Because legitimate reasons vary for schools using NSSE at different intervals, the best answer to how frequently an institution should obtain student engagement data depends on the needs of a given college or university.

What If Accreditation Is Around the Corner?

For some institutions, a self-study or site visit review may be just a year away. In this case, NSSE can still provide valuable data to schools during even for a single year. Keep in mind that schools must register for NSSE by September, the survey is administered during the spring semester, and results are provided to schools in August.

This timeline offers institutions baseline data to demonstrate educational strengths and weaknesses and results to corroborate institutional evidence. In addition, subsequent NSSE administrations can be used to evaluate institutional improvement efforts outlined in the self-study.

The NSSE Administration Timeline below provides guidelines for scheduling NSSE participation for use of NSSE results in accreditation.

NSSE Administration Timeline

Year 1

- | | |
|--------------------|---|
| Summer–Fall | <ul style="list-style-type: none"> ● Create a budget for accreditation process, including NSSE administration fees ● Register for NSSE before mid-September deadline ● View NSSE Webinars on survey administration ● Receive NSSE results in <i>Institutional Report</i> (August), <i>Major Field Report</i> (October), and <i>Annual Results</i> (November) |
| Fall–Winter | <ul style="list-style-type: none"> ● Customize NSSE by choosing modules, joining consortia, or forming systems ● Prepare administration and promotional materials such as population files, recruitment messages, incentives ● Coordinate delivery of recruitment messages with campus IT staff ● Working groups review NSSE results from previous administrations for self-study |

Year 2

- | | |
|----------------------------|--|
| Winter–Early Spring | <ul style="list-style-type: none"> ● Administer NSSE survey ● Send reminder messages to nonrespondents |
| Late Spring | <ul style="list-style-type: none"> ● Customize survey reports by choosing comparison groups, major field groups, and other reporting options ● Survey administration closes early June |
| Summer–Fall | <ul style="list-style-type: none"> ● <i>Institutional Report</i> (August) delivery and data files available for download from NSSE Institution Interface ● <i>Major Field Report</i> available for download (October) ● <i>Annual Results</i> delivery (November) |

Recent Trends in Accreditation

The following trends in accreditation support the use of student engagement results in assessment and institutional improvement initiatives:

- Campuses and accrediting bodies are moving toward self-studies that systematically over time review existing processes (like strategic planning, program evaluation, student services, and enrollment management), as contrasted with one-point-in-time reports that have limited utility.
- Accrediting bodies have shifted away from setting and holding institutions to rigid quantitative standards that feature inputs and resources toward empirically based indicators of institutional effectiveness and student learning.
- Regional and program accreditors are emphasizing the importance of cultivating “cultures of evidence” that nurture and sustain continuous improvement. Progressive campus leaders increasingly are harnessing the regional reaccreditation process as a “chariot for change.” Rather than viewing the process as a burden or hurdle to be overcome, presidents, provosts, and deans are using the self-study and team visit as an opportunity to stimulate productive dialogue and to guide constructive change.

Accreditation Tips

Tip #1:

Student engagement results provided by NSSE are one direct indicator of what students put into their education and an indirect indicator of what they get out of it.

Tip #2:

NSSE items can be used to analyze the resources and appraise the effectiveness of the institution in fulfilling its mission. Two such measures included in the educational gains items are the extent to which students’ experiences at the institution have: 1) contributed to their knowledge, skills, and personal development in acquiring a broad general education; and 2) helped them develop a personal code of values and ethics. The measurement of these experiences could be used to demonstrate achievement of the institution’s mission and goals.

Tip #3:

NSSE data are actionable in that they point to aspects of student and institutional performance institutions can address related to the curriculum, pedagogy, instructional emphases, and campus climate. In addition, because NSSE benchmarks allow a school to compare itself to others, the results often point to areas where improvement may be desired.

Tip #4:

Share NSSE results widely to expand the audience’s view of the accreditation data. Spend time thinking about with whom you will share specific results from your data. For example, Oregon State University has disseminated its NSSE results to relevant student affairs departments, like housing and academic advising, who in turn can use the data to better understand how their students interact with available services.

Tip #5:

The Faculty Survey of Student Engagement (FSSE) measures faculty expectations of student engagement in educational practices empirically linked with high levels of learning and development. Combined, NSSE and FSSE results can help identify areas of strength as well as aspects of the undergraduate experience that may warrant attention and stimulate discussions on improving teaching, learning, and the quality of students’ educational experience.

Tip #6:

Share NSSE results with appropriate campus community members to help sharpen their reports to the accreditation team. For example, distribute NSSE results on the experience of first-generation and commuter students to academic support services and commuter student offices. Data regarding the degree to which students report the institution helps them cope with nonacademic responsibilities and succeed academically and their satisfaction with advising can be used to demonstrate adequate provision of services to meet students’ learning and personal development needs.

Tip #7:

NSSE results can help assess the degree to which the institution encourages contact among students from different economic, social, and racial or ethnic backgrounds and the extent to which students report that their experiences at the institution have contributed to their knowledge, skills, and personal development in understanding people of other racial and ethnic backgrounds. Results also can demonstrate institutional effectiveness in responding to the increasing diversity in society through educational and co-curricular programs.

Additional Information

This document, accreditation toolkits from previous years, examples of how institutions have used NSSE data for accreditation, and research reports related to NSSE data and accreditation are available on the NSSE Institute website.

nsse.indiana.edu/html/accred_toolkits.cfm

Mapping NSSE Items to Higher Learning Commission–North Central Association (HLC–NCA) Criteria

A successful accreditation plan is authentic to each institution. An important step in developing any accreditation plan, however, is identifying the existing evaluation practices and the evidence from them that can be linked to accreditation standards, commitments, and/or criteria. This document offers guidelines for aligning NSSE survey items with regional accreditation standards.

A team of NSSE staff members reviewed accreditation standards for each accreditation organization and mapped NSSE survey items to those standards that we thought closely corresponded. Our hope is that this alignment encourages institutions to consider various ways to integrate NSSE data into accreditation processes, beyond simply mentioning NSSE as an element in its systematic assessment activities.

This toolkit, including the table on pages 6 and 7, “NSSE 2017 Survey Items Mapped to HLC–NCA Criteria and Core Components,” is not intended as a strict formula for relating NSSE results to accreditation standards but, rather, as a stimulus to think more broadly about how these data can provide evidence to support specific standards. NSSE findings can also be used to support and document institutional improvement efforts but will be most meaningful when coupled with other measures of student learning outcomes for your campus.

Specific Core Requirements

HLC has historically offered two programs for the process of reaffirmation of accreditation, the Program to Evaluate and Advance Quality (PEAQ) and the Academic Quality Improvement Program (AQIP). While AQIP will remain an unchanged option for reaffirmation, in September 2012, a three-year transition period began during which PEAQ will be replaced by two new processes, the Standard Pathway and the Open Pathway.

The Higher Learning Commission’s *New Criteria for Accreditation and Core Components* went into effect for all institutions on January 1, 2013. Both the Standard and Open Pathway options as well as the AQIP process will require that institutions meet this set of Criteria and Core Components. Updated NSSE 2017 survey items have been aligned in this toolkit with the new Core Components. Previous HLC–NCA Accreditation Toolkits for NSSE 2004–2012 survey items are available on the NSSE website. nsse.indiana.edu/links/accred_toolkits

Standards in Effect September 2012/January 2013

The New Criteria for Accreditation and Core Components. (2012, September). Higher Learning Commission.

NSSE Demographic Items, Consortium Questions, and Topical Modules

In addition to the survey items shown in the following table, the updated NSSE survey contains demographic items, Questions 20–38, that may be of value for examining practices by student subpopulation and for exploring the influence of institutional conditions and student characteristics such as on-campus residence and student status including first-generation, student-athlete, or veteran. Institutions participating in a consortium may also have results relevant to accreditation, including assessment of mission effectiveness.

New customization options on the updated survey include Topical Modules—short sets of questions on topics such as academic advising, writing, and technology use. Responses to these items may help with the assessment of particular practices and provide evidence of quality including, for example, quality of advising, student use of technology, perceptions of institutional support, and relationships between writing and learning. Additional modules will be added over time.

NSSE 2017 Survey Items Mapped to HLC–NCA Criteria and Core Components

NSSE 2017 Survey Items	HLC–NCA Core Components
1. During the current school year, about how often have you done the following?	
a. Asked questions or contributed to course discussions in other ways	3.B, 3.E
b. Prepared two or more drafts of a paper or assignment before turning it in	3.B, 3.E
c. Come to class without completing readings or assignments	3.E
d. Attended an art exhibit, play, dance, music, theater, or other performance	3.B, 3.E
e. Asked another student to help you understand course material	3.E
f. Explained course material to one or more students	3.B
g. Prepared for exams by discussing or working through course material with other students	3.B, 3.E
h. Worked with other students on course projects or assignments	3.B, 3.E
i. Gave a course presentation	3.B, 3.E
2. During the current school year, about how often have you done the following?	
a. Combined ideas from different courses when completing assignments	3.B, 3.E
b. Connected your learning to societal problems or issues	1.C, 3.B, 3.E
c. Included diverse perspectives (political, religious, racial/ethnic, gender, etc.) in course discussions or assignments	1.C, 3.B, 3.E
d. Examined the strengths and weaknesses of your own views on a topic or issue	3.B, 3.E
e. Tried to better understand someone else’s views by imagining how an issue looks from his or her perspective	3.B, 3.E
f. Learned something that changed the way you understand an issue or concept	3.B, 3.E
g. Connected ideas from your courses to your prior experiences and knowledge	3.B, 3.E
3. During the current school year, about how often have you done the following?	
a. Talked about career plans with a faculty member	3.C, 3.E
b. Worked with a faculty member on activities other than coursework (committees, student groups, etc.)	3.B, 3.C
c. Discussed course topics, ideas, or concepts with a faculty member outside of class	3.B, 3.C
d. Discussed your academic performance with a faculty member	3.C
4. During the current school year, how much has your coursework emphasized the following?	
a. Memorizing course material	3.B, 3.E
b. Applying facts, theories, or methods to practical problems or new situations	3.B, 3.E
c. Analyzing an idea, experience, or line of reasoning in depth by examining its parts	3.B, 3.E
d. Evaluating a point of view, decision, or information source	3.B, 3.E
e. Forming a new idea or understanding from various pieces of information	3.B, 3.E
5. During the current school year, to what extent have your instructors done the following?	
a. Clearly explained course goals and requirements	3.C
b. Taught course sessions in an organized way	3.C
c. Used examples or illustrations to explain difficult points	3.C
d. Provided feedback on a draft or work in progress	2.E, 3.C
e. Provided prompt and detailed feedback on tests or completed assignments	2.E, 3.C
6. During the current school year, about how often have you done the following?	
a. Reached conclusions based on your own analysis of numerical information (numbers, graphs, statistics, etc.)	3.B, 3.E
b. Used numerical information to examine a real-world problem or issue (unemployment, climate change, public health, etc.)	3.B, 3.E
c. Evaluated what others have concluded from numerical information	3.B, 3.E
7. During the current school year, about how many papers, reports, or other writing tasks of the following length have you been assigned? (Include those not yet completed.)	
a. Up to 5 pages	3.B, 3.E
b. Between 6 and 10 pages	3.B, 3.E
c. 11 pages or more	3.B, 3.E
8. During the current school year, about how often have you had discussions with people from the following groups?	
a. People of a race or ethnicity other than your own	1.C., 3.B, 3.E
b. People from an economic background other than your own	1.C., 3.B, 3.E
c. People with religious beliefs other than your own	1.C., 3.B, 3.E
d. People with political views other than your own	1.C., 3.B, 3.E

NSSE 2017 Survey Items Mapped to HLC–NCA Criteria and Core Components (cont.)

NSSE 2017 Survey Items	HLC–NCA Core Components
9. During the current school year, about how often have you done the following?	
a. Identified key information from reading assignments	3.B, 3.E
b. Reviewed your notes after class	3.B, 3.E
c. Summarized what you learned in class or from course materials	3.B, 3.E
10. During the current school year, to what extent have your courses challenged you to do your best work?	3.A, 3.B, 3.E
11. Which of the following have you done or do you plan to do before you graduate?	
a. Participate in an internship, co-op, field experience, student teaching, or clinical placement	1.D, 3.B, 3.E, 4.C
b. Hold a formal leadership role in a student organization or group	3.E
c. Participate in a learning community or some other formal program where groups of students take two or more classes together	3.B, 3.D, 3.E
d. Participate in a study abroad program	1.C, 3.B, 3.E
e. Work with a faculty member on a research project	3.B, 3.E
f. Complete a culminating senior experience (capstone course, senior project or thesis, comprehensive exam, portfolio, etc.)	3.B, 3.E
12. About how many of your courses at this institution have included a community-based project (service-learning)?	1.D, 3.E
13. Indicate the quality of your interactions with the following people at your institution.	
a. Students	3.B, 3.E
b. Academic advisors	3.B, 3.E
c. Faculty	3.B, 3.E
d. Student services staff (career services, student activities, housing, etc.)	3.B, 3.E
e. Other administrative staff and offices (registrar, financial aid, etc.)	3.B, 3.E
14. How much does your institution emphasize the following?	
a. Spending significant amounts of time studying and on academic work	3.E
b. Providing support to help students succeed academically	3.B, 3.E
c. Using learning support services (tutoring services, writing center, etc.)	3.D, 3.E
d. Encouraging contact among students from different backgrounds (social, racial/ethnic, religious, etc.)	1.C, 3.B
e. Providing opportunities to be involved socially	3.E
f. Providing support for your overall well-being (recreation, health care, counseling, etc.)	3.E
g. Helping you manage your non-academic responsibilities (work, family, etc.)	
h. Attending campus activities and events (performing arts, athletic events, etc.)	3.B, 3.E
i. Attending events that address important social, economic, or political issues	3.E
15. About how many hours do you spend in a typical 7-day week doing the following?	
a. Preparing for class (studying, reading, writing, doing homework or lab work, analyzing data, rehearsing, and other academic activities)	3.E
b. Participating in co-curricular activities (organizations, campus publications, student government, fraternity or sorority, intercollegiate or intramural sports, etc.)	3.E
c. Working for pay on campus	3.E
d. Working for pay off campus	
e. Doing community service or volunteer work	1.D, 3.B, 3.E
f. Relaxing and socializing (time with friends, video games, TV or videos, keeping up with friends online, etc.)	
g. Providing care for dependents (children, parents, etc.)	
h. Commuting to campus (driving, walking, etc.)	
16. Of the time you spend preparing for class in a typical 7-day week, about how many hours are on assigned reading?	3.A, 3.B, 4.B, 4.C
17. How much has your experience at this institution contributed to your knowledge, skills, and personal development in the following areas?	
a. Writing clearly and effectively	3.B, 3.E
b. Speaking clearly and effectively	3.B, 3.E
c. Thinking critically and analytically	3.B, 3.E
d. Analyzing numerical and statistical information	3.B, 3.E
e. Acquiring job- or work-related knowledge and skills	3.B, 3.E
f. Working effectively with others	1.C, 3.B, 3.E
g. Developing or clarifying a personal code of values and ethics	2.E, 3.E
h. Understanding people of other backgrounds (economic, racial/ethnic, political, religious, nationality, etc.)	1.C, 3.B, 3.E
i. Solving complex real-world problems	1.D, 3.B, 3.E
j. Being an informed and active citizen	1.C, 3.B, 3.E
18. How would you evaluate your entire educational experience at this institution?	3.B, 3.E
19. If you could start over again, would you go to the same institution you are now attending?	3.B, 3.E

Institutional Examples

Interest in using NSSE in accreditation is growing across all sectors and types of institutions. Because NSSE focuses on student behavior and effective educational practices, colleges and universities have found productive ways to incorporate survey results in their institutional self-studies. In this section, we describe how selected institutions are using NSSE in accreditation.

Higher Learning Commission–North Central Association (HLC–NCA)

St. Cloud State University

In its self-study, *Reaching Higher*, prepared in April 2007 for HLC, St. Cloud State University indicated that data from external norm-referenced instruments used at the institution, NSSE, and other surveys “have been collected since 2001 and have been used as action guides for student life and development staff as well as for improvements in academic support and academic programs.” NSSE results have been used as evidence for numerous criteria for St. Cloud’s self-study.

In Criterion Two of HLC standards, Core Component 2A, on an institution’s preparation for the future, St. Cloud states that NSSE data, with other assessment tools, have been discussed in academic and administrative groups resulting in changes in the Division of Student Life and the First-Year Experience, and the development of an early warning system for students experiencing academic difficulty.

For Core Component 2C, requiring evidence of an effective, ongoing evaluation and assessment process, NSSE data along with other survey results provide a snapshot of the student experience: for example, how students are interacting and how St. Cloud might enhance these interactions in terms of diversity and how technology is used in communication and course content. Students report that faculty members use technology effectively and enhance their courses with self-paced electronic resources. Student responses are used to plan student services and have led to the creation of the First-Year Experience program and the appointment of additional staff to the advising, honors, and counseling programs.

For student learning and effective teaching, Criterion Three, NSSE results were used to support Core Component 3C, on effective learning environments. Scores on NSSE items showed that St. Cloud students participate in significantly more community-based projects than selected peers and the entire NSSE cohort. St. Cloud students also worked with peers inside and outside the classroom more frequently, “developing important skills in becoming lifelong learners.”

University of Denver (DU)

In support of Standard 3.A.3 of its 2010 self-study for HLC–NCA, the University of Denver (DU) assesses student learning at multiple levels using multiple methods that include NSSE, BCSSE, and other student satisfaction surveys. Multi-year analyses of benchmark scores were reviewed by the chancellor, provost, and other senior administrators. Institutional research staff conducted student focus groups and also, in particular, found concerns about the distributed nature of administrative services at DU reflected in lower scores on the Supportive Campus Environment (SCE) benchmark than DU’s peers and comparison groups. This led to the creation of the Center for Academic and Career Development, a “one-stop” service model. Combined use of NSSE and BCSSE results has also provided further support for Standard 3.A.3. In fall 2009, BCSSE was administered to the cohort of incoming students, who then took the NSSE survey in spring 2009. Longitudinal analyses of responses of this same cohort in their senior year to the 2012 NSSE survey will be used as indirect evidence to explore institutional factors at DU that best support student learning.

Middle States Commission on Higher Education (MSCHE)

Juniata College

Juniata College can be described as a “data rich” institution, where senior administrators are firm believers in gathering as much data as possible to inform their planning efforts. NSSE results have fed Juniata’s planning efforts, were used in the reaccreditation process beginning with its 2001 self-study for MSCHE, and will be used for their 2012–13 review. NSSE benchmarks and high-impact practices are integrated into Juniata’s strategic plan, and results on survey items such as study abroad, internships, and critical and analytical skills will be monitored in its long-range planning. Juniata faculty have shown increasing interest in NSSE results, and the International Learning Assessment Committee has been charged with reviewing the impact of study abroad. Because a large cohort participated in study abroad in 2010, the committee plans to examine NSSE results for correlations between study abroad and levels of engagement.

Morgan State University (MSU)

Reaccredited by MSCHE in 2008 and designated by the state legislature “Maryland’s Public Urban University,” Morgan State University (MSU) chose a model for its 2008 Middle States Self-Study aligning Baldrige Education Criteria for Performance Excellence with the 14 MSCHE standards for excellence. Morgan used focus groups, NSSE results, and other national assessment instruments as evidence of student and stakeholder satisfaction to support MSCHE Standard 9, Student

Support Services: “The institution provides student support services reasonably necessary to enable each student to achieve the institution’s goals for students,” which was combined with Baldrige Category 3, Student Stakeholder and Market Focus.

A series of focus groups, “Opportunities for Continuous Improvement in Academics,” was carried out in 2007 in which students, faculty, and administrators offered suggestions to improve customer service at MSU. Results from NSSE, an internal first-year survey, and findings from an external consultant agency also addressed concerns with customer service, especially student registration processes. The university also established the Morgan Cares and Helping Hands programs as a result of its involvement in the Building Engagement and Attainment for Minority Students (BEAMS) project.

For MSCHE Standard 14, Assessment of Student Learning, one of the two major assessment standards of MSCHE’s Characteristics of Excellence guidelines, Morgan linked Baldrige Category 7, Organizational Performance Results and used NSSE and Faculty Survey of Student Engagement (FSSE) results to measure the success of the university’s assessment plan. Specific NSSE items on addressing faculty expectations, participating in community-based projects, applying theories and concepts to practical problems, monitoring the number of papers and books read, and gaining work-related knowledge and skills were highlighted.

The university continues to promote a strong liberal arts curriculum and improvement in its students’ written and oral communication skills through a quality General Education program. NSSE and FSSE provided responses on student engagement from both student and faculty perspectives. In addition to effective written and oral communication, survey items of particular relevance to Morgan’s assessment included acquiring a broad general education, thinking critically and analytically, analyzing quantitative problems, using computing and information technology, and solving complex real world problems.

New Jersey Institute of Technology (NJIT)

As described in its self-study, “A Science and Technology Research University for the 21st Century,” the New Jersey Institute of Technology (NJIT) is “an assessment-based university in terms of educational effectiveness.” The development of its Strategic Plan 2012–2015, coincided with the institution’s 10-year bid for reaffirmation of accreditation from MSCHE and provided an opportunity to unify assessment efforts. NJIT used first-year student results from 2008 and 2010 NSSE administrations related to classroom presentations, collaborating on projects, tutoring other students, diversity experiences, and development of ethical values as indirect measures for MSCHE Standard 14, Assessment of Student Learning.

Additional results from seniors on writing 20+-page papers, working with classmates outside of class, serving as tutors, participating in discussions on ethnic diversity, and participating in a capstone project were used to compare NJIT’s performance with that of Carnegie peers. Also under Standard 14, NJIT highlighted results from participation in NSSE’s Consortium for the Study of Writing in College as evidence of strong competence in a variety of writing measures. NSSE administration was also factored into the new NJIT Integrated Assessment System Matrix, and results were charted for use by senior administration and department chairs for the development of curriculum and the allocation of resources.

New England Association of Schools and Colleges (NEASC)

College of the Atlantic (COA)

Founded in the late 1960s to incorporate the concepts of human ecology into a traditional liberal arts curriculum, the College of the Atlantic prepares students “to practically apply their learning to improve prospects for a sustainable, peaceful, and just society.” In an action-oriented environment, COA’s self-directed students participate in the construction of their own academic programs. Coursework is interdisciplinary and experiential. There are no academic departments and faculty are nonranked. “All members of the community were encouraged to engage in the institution’s governance in order to learn about democracy, cooperation, and leadership” (p. 2). COA prepared its NEASC self-study for reaffirmation in this spirit of participatory governance. For NEASC Standard Four, The Academic Program, overall survey participation and student responses on selected NSSE items provided evidence of an effective institutional assessment strategy and a successful academic advising program. Items related to making a class presentation, interacting with peers from different backgrounds, participating in co-curricular activities, and writing multiple drafts of papers were used for assessment. In addition, qualitative and quantitative evidence—NSSE results and increased retention rates, particularly from the first- to second-year of study—were used to demonstrate a successful approach to academic advising.

Worcester State University

In its 2012 self-study for NEASC reaffirmation, Worcester State shared data from 2008 and 2011 NSSE administrations via roundtable discussions and provided results at program and department levels. Results from a 2012 FSSE administration will be compared with previous NSSE responses as indirect measures of student and faculty engagement indicators for Standard 4, The Academic Program, Assessment of Student Learning. A third survey, the Commuter and Off-Campus Student

Experience Survey (COSES), administered in 2012, will provide additional data on needs and experiences of commuter students. These three surveys will continue to be administered over time to identify long-term trends and patterns. Worcester State also plans to use combined data from NSSE and FSSE as a knowledge base to bolster its retention efforts. Campus-wide discussions are planned to gather ideas on ways to support students both inside and outside the classroom.

Northwest Commission on Colleges and Universities (NWCCU)

Washington State University (WSU)

To support its 2009 self-study for the Northwest Commission on Colleges and Universities, Washington State University (WSU) used NSSE scores over multiple years for evidence of the impact of several programs initiated to improve student engagement and learning. These programs included:

- A first-year living-learning community, titled “Freshmen Focus”
- Integrated residence hall programming and co-curricular activities
- Implementation of a new foreign language requirement for the honors program as well as an elective for general education studies
- Residence hall tutoring services
- Increased emphasis on experiential learning

To further support first-year initiatives and improve NSSE benchmark scores on student-faculty interaction and active and collaborative learning, WSU offered faculty curriculum improvement grants. “Preliminary data from the 2008 NSSE indicate that the pilot projects introduced in 2005–07 have begun to impact the student experience.” Built into WSU’s new strategic plan for 2008–2013 are goals to enhance the student experience and build deep learning experiences into curriculum at all levels.

University of Utah (U of U)

Based on previous accreditation visits, the University of Utah (U of U) knew it needed a comprehensive and systematic student outcomes assessment plan. To help prepare for a 2006 reaccreditation visit, the university created an assessment plan focusing on three core issues: student progression, student learning, and student engagement and university experiences. Two teams were formed to coordinate and direct this effort, the Student Outcomes Assessment Council and the Assessment Working Group. In terms of student progression, results from NSSE and other surveys have shown that U of U students spend more hours off-campus involved in work, family, and church missions. The university planned to

increase its efforts to retain these students and to improve student engagement in social and academic areas so that its future NSSE scores compare more favorably with those of peer institutions. The university has also been working to “increase enrollments in courses with substantial amounts of student-faculty interaction, and to develop structures and events that can build social networks and create a shared sense of community on our urban, decentralized, and largely commuter campus.”

Southern Association of Colleges and Schools Commission on Colleges (SACSCOC)

Auburn University

A 30-member, campus-wide Quality Enhancement Plan (QEP) Exploratory Committee was formed in 2010 to explore potential topics for Auburn University’s 2013 QEP for SACSCOC. In 14 meetings over the next year, the committee reviewed results from an internal survey and short proposals for QEP concepts. Eight proposals received funding for further development and four of these were recommended to senior leadership, who selected The ePortfolio Project: Communicating Learning the Auburn Way as Auburn’s QEP topic. The QEP Development Committee, formed in 2011, was charged with reviewing research on ePortfolios; refining the scope of the project; developing a plan, budget, and timeline; and preparing a final report for SACSCOC based on review and input from the Auburn community.

NSSE data along with results of Auburn’s 2010 participation in the Consortium of Colleges Studying Writing (CCSW) in 2010 were used in the selection of a QEP topic and creation of the implementation plan. A number of NSSE survey items overlapped with Auburn’s ePortfolio Project Student Learning Outcomes including (a) making class presentations; (b) preparing drafts, integrating information from different sources; (c) synthesizing information or experiences; (d) making judgments; (e) acquiring job skills; (f) writing clearly and effectively; (g) thinking critically and analytically; (h) speaking clearly and effectively; (i) using computing and information technology; and (j) understanding self in relation to Auburn’s ePortfolio Project. The 27 additional questions CCSW developed as a part of NSSE asked students about including visual materials in documents, creating projects with multi-media, addressing a real audience, using language and genres of the discipline, and creating a portfolio that collects work from more than one class. As part of a longitudinal study by the Office of University Writing, the faculty version of the CCSW survey was administered in fall 2010 to all faculty who were teaching or who had taught an upper division course in the previous three years. Auburn planned to administer the student and faculty versions of the consortium

questions again in 2015 and analyze any changes in responses from 2010 to 2015 to key questions relevant to ePortfolio Project learning outcomes. Auburn plans to use these results to help assess student learning outcomes as well as the impact and benefits of the ePortfolio Project on students, faculty, curriculum, and other stakeholders.

Georgia State University (GSU)

Georgia State University (GSU) used NSSE results in the preparation of its Quality Enhancement Plan (QEP) for reaccreditation by SACSCOC in 2008. The focus of the QEP was to increase undergraduate students' critical thinking and writing skills in their major field of study. Upon review by the QEP Leadership Committee, NSSE data revealed that, compared to their Carnegie peers, GSU seniors wrote fewer short papers and felt their undergraduate experience did not contribute much to their critical thinking abilities. The committee found similar results from an internal survey administered each semester to recent graduates that measures learning outcomes and academic program satisfaction. These findings informed the final QEP, *Critical Thinking Through Writing*, which proposed targeted efforts to improve students' critical thinking and writing skills in their major field of study.

Kennesaw State University (KSU)

The Quality Enhancement Plan (QEP) of Kennesaw State University (KSU) for 2007–2012, *Global Learning for Engaged Citizenship*, is a “five-year plan...to raise global learning to the top tier of KSU’s educational priorities and outcomes.” The plan relies heavily on longitudinal assessment of NSSE data as well as “nuggets” from 2005 NSSE results to provide baseline evidence of KSU’s impact on student learning outcomes. KSU’s QEP contains ten goals with related action plans and strategies for assessing progress. For example, analyses of NSSE scores from 2004, 2005, and 2006, indicated the KSU students did not report desired levels of exposure to diversity, participation in study abroad, and taking a foreign language to support KSU’s global learning goals. Goals 1–9 of the plan concentrate on strengthening leadership, financial, and infrastructure commitments “to the promotion and interaction of visibility and awareness of the importance of global learning,” and to enhancing student success programs. The action plan for Goal 10, “Campus-Wide Engagement in Global Learning Will Increase Greatly,” focuses on assessing the summative impact of Goals 1–9 and includes biennial participation in NSSE through 2012. Survey responses of KSU seniors will be used for trend analysis and to show gains in targeted areas.

The University of Texas at Tyler (UT Tyler)

The University of Texas at Tyler (UT Tyler) participates in NSSE to gather evidence for strategic planning and accreditation. UT Tyler’s 2009–2015 strategic plan,

Inspiring Excellence, incorporates assessment of study abroad and global citizenship using NSSE results. Along similar lines, UT Tyler’s Quality Enhancement Plan (QEP), “Global Awareness Through Education” (GATE), was submitted in 2010 for reaffirmation by SACSCOC. The goals of the QEP are to infuse the general education curriculum with global issues and topics, create new student learning communities centered on a study abroad experience, and provide greatly expanded co-curricular activities on campus led by the GATE learning community students and faculty.

University of Tennessee at Chattanooga (UTC)

In fall 2008, the University of Tennessee at Chattanooga (UTC) QEP committee, comprised of faculty, staff, and students from representative areas of campus, examined a variety of institutional student assessments, which included data from the 2005 and 2006 NSSE and 2005 FSSE administrations. Because results revealed a large discrepancy between student and faculty perceptions of higher level cognitive skills being exercised in the classroom, student and faculty responses on NSSE and FSSE were then used to help define the focus of UTC’s QEP. A number of faculty members believed these skills were being taught but that students did not fully understand what they were being asked to do. Results were used as a starting point for 15 campus-wide discussions held during the 2008–09 academic year. Discussions were conveniently scheduled to provide university representatives the opportunity to attend at least one session and resulted in identification of critical thinking as a foundation for UTC’s QEP, *ThinkAchieve: Creating Connections*, beginning with the following formal definition of critical thinking:

Critical thinking is the habitual practice of raising questions, identifying problems, analyzing existing information, creating innovative solutions, and reflecting on the process and the product as a means of constant improvement.

This definition was integrated into pre-orientation and orientation programming, the curriculum, and experiential learning programs. The programs will be phased in over a period of five years and will relate directly to the mission and strategic plan of UTC.

Designed to meet many of the standards as outlined in SACS Principles of Accreditation (2008), Core Requirements 3.3, Institutional Effectiveness, UTC’s ThinkAchieve program:

1. includes a broad-based institutional process identifying key issues emerging from institutional assessment;
2. focuses on learning outcomes and/or the environment supporting student learning and accomplishing the mission of the institution;

3. demonstrates institutional capability for the initiation, implementation, and completion of the QEP;
4. includes broad-based involvement of institutional constituencies in the development and proposed implementation of the QEP; and
5. identifies goals and a plan to assess their achievement

(ThinkAchieve: Creating Connections, p. 9)

Funds have been budgeted for the 5-year plan beginning with the 2011–2012 academic year. In addition to three new assessment positions, funds for participation in NSSE, FSSE, Critical Thinking Assessment Test (CAT), and other survey tools, have been appropriated. Each year, NSSE and FSSE results will be used to assess whether student and faculty perceptions have begun to align and reflect the intended outcomes of the QEP.

Western Association of Schools and Colleges (WASC)

California State University Sacramento (CSUS)

In its Educational Effectiveness Review, submitted in January 2009 to WASC as part of the reaccreditation process, California State University Sacramento (CSUS) used its NSSE results to support Criterion 2.10 under Standard 2.C, “Regardless of mode of program delivery, the institution regularly identifies the characteristics of its students and assesses their needs, experiences, and levels of satisfaction. This information is used to help shape a learning-centered environment and to actively promote student success.” NSSE results along with data gathered from student and alumni surveys, assessment surveys, and the learning skills and honors programs were used as evidence that the university gathers information about student needs, experiences, and satisfaction on a regular basis and uses this information for institutional planning and review. Executive summaries, respondent characteristics, and mappings of CSUS’s NSSE results from 2002, 2004, 2005, and 2008 to WASC standards are displayed on its institutional website.

www.csus.edu/oir/Reports/NSSE/NSSE.html

Humbolt State University (HSU)

Humbolt State University (HSU) was able to use its recently completed five-year strategic plan, multi-decade master plan, and a comprehensive diversity plan to develop its WASC reaccreditation proposal. A WASC Proposal Steering Committee, including administrative, faculty and staff representatives, was created upon recommendation of HSU’s administration to guide the

WASC proposal process. The committee made presentations and distributed a modified version of WASC self-review to campus-wide units. After analyzing the data, the committee recommended focusing on three themes: academic excellence, diversity, and retention. For the Capacity and Preparatory Review, the university enhanced its web-based data repository of materials to provide WASC teams and the campus community with access to reaccreditation materials: “data, policies, and procedures as evidence in support of the standards and related criteria.” NSSE results will be one of the assessment tools used to support Standard 2, Achieving Educational Objectives Through Core Functions, and for Standard 4, Creating an Organization Committed to Learning and Improvement.

Mills College

Mills College used results from its participation in NSSE 2008 in its WASC Capacity and Preparatory Review Report. On WASC Standard One, Defining Institutional Purposes and Ensuring Educational Objectives, a newly approved strategic plan helped Mills align its mission with a focus on enhancing “the multicultural learning community, and developing programs that emphasize interdisciplinary and interactive learning, social justice, leadership skills, and global diversity” (p. 4). Mills detailed the use of NSSE responses of first-year and senior students on the levels of academic challenge, faculty support, and collaborative learning as part of its evidence in support of Criteria for Review (CFR) 1.2: the institution “develops indicators for the achievement of its purposes and educational objectives at the institutional, program, and course levels” and “has a system of measuring student achievement, in terms of retention, completion, and student learning.”

Historically, Mills has placed major emphasis on faculty pedagogy and scholarship. Over the past five years, full-time faculty members have reported a significant decrease in the amount of their reliance on lecturing in favor of actively involving students in the learning process. To support WASC Standard Two, Achieving Educational Objectives through Core Functions, NSSE results on items related to active and collaborative learning were used to show that Mills students compare well against comparison groups and the entire NSSE cohort.
