Re: ***Report of Investigations 99-7: Archaeological Monitoring During Soil
Boring at Site 12 Sw 351***

Soil boring excavation and monitoring at 12 Sw 351 occurred on February 24-25 and on March 1-2 and 10-11. All drilling at the site was supervised by GBL staff archaeologist Wendy L. Natt. Boring excavations were closely supervised for at least the first (top) three meters (10 feet) of each hole. A total of 19 borings were excavated within 12 Sw 351. The borings were approximately 9 inches in diameter and holes ranged from 10 feet to 100 feet in depth. No significant cultural deposits were encountered in any of the soil borings.
