

EXPLANATION
INDIANA GEOLOGICAL SURVEY
PETROLEUM WELL SYMBOLS

The following symbols include all of the primary petroleum well symbols used by the Indiana Geological Survey. These symbols may be modified using the three modifiers listed below to provide additional information about the status or source data for a particular well. This list may include symbols not shown on this particular map.

- M** permitted location
- P** dry hole
- o** oil
- B** gas
- ** shut-in gas
- d** oil and gas
- D** gas storage
- S** gas storage formerly oil
- E** gas storage formerly gas
- F** water injection
- G** water injection formerly oil
- H** water injection formerly gas
- +** water injection formerly oil and gas
- H** observation
-)** observation formerly gas
- "** observation formerly gas storage
- S** Trenton well, possibly productive; only available information is uncertain location
- I** salt water disposal
- O** salt water disposal formerly oil
- o** salt water disposal formerly gas
- L** salt water disposal formerly gas storage
- L** potable water supply
- L** nonpotable water supply formerly oil
- J** nonpotable water supply formerly gas
- J** waste disposal
- O** temporarily abandoned
- !** confidential well
- !** confidential workover
- 7** confidential coal boring
- Z** other boring
- Y** stratigraphic test
- (** surface location of deviated hole
- ^** path of deviated hole

SYMBOL MODIFIERS

Modifiers may be added to any standard IGS well symbol to denote the following three criteria:

- abandoned
- completion type uncertain
- location uncertain

Petroleum field boundary; encloses wells classified in a single field, but is not intended to indicate the extent of producing reservoirs.

Natural gas pipeline
Numbers indicate diameter of pipeline(s) in inches

Hoosier National Forest
 Ferdinand State Forest

PETROLEUM WELL DATA LABELS

In densely drilled areas, it is not possible to post well data labels for all wells present because the labels would overlap well symbols and other labels, making the map unreadable. For a more complete representation of well data in such areas, the IGS provides Petroleum Well Location Maps at larger scales.

ACCURACY OF WELL LOCATIONS

Locational coordinates of wells contained within the Indiana Geological Survey's Petroleum Database Management System (PDMS) and their corresponding locations as shown on maps are believed to be reasonably accurate when portrayed on a scale of 1 inch to 1 mile. Although the coordinates for a great many locations in the database have been very accurately determined, past practices and inherent limitations on the accuracy with which a well was spotted on a 1:24,000-scale USGS topographic map have resulted in well coordinates that locate wells a small distance from their actual locations. Depending on circumstances, this distance could be as great as 100 feet, or rarely, somewhat more. In general, such locations are sufficiently accurate for most petroleum exploration and field mapping purposes. Additionally, it is important to note that new and revised data continually are being entered into the PDMS and, despite the use of careful procedures and proofing of the entered data, human error always remains a possibility. Every effort is made to correct errors and discrepancies whenever they are identified, but it is the responsibility of the user to verify any information to the extent it is deemed important.

GENERAL DISCLAIMER

This map was compiled by the Indiana Geological Survey, Indiana University, using data believed to be accurate; however, a margin of error is inherent in all maps. This map is distributed "AS-IS" without warranties of any kind, either expressed or implied, including but not limited to warranties of suitability of a particular purpose or use. There is no attempt in either the design or production of this map to define the jurisdiction of any federal, state, or local government. This map is intended for use only at the scale of 1:63,360 or smaller.

DATA AVAILABILITY

Paper copies, as well as digital Adobe Acrobat formats, are available for purchase through the Publications Sales Office of the Indiana Geological Survey, Indiana University. Larger-scale maps, optionally showing additional well information may also be obtained from the IGS. Availability may depend on the current status of information contained in the IGS's Petroleum Database Management System. Prices for larger-scale maps vary depending on the amount of custom preparation needed to produce the map. Requests for specific well information should be directed to the Subsurface Geology Section, Indiana Geological Survey.
