

# *Workshop in Methods*

Social Science Research Commons

## **Your Statistical Toolbelt**

**Stephanie Dickinson**

*Senior Consultant*

*Indiana University Statistical Consulting Center*

---

This workshop will give an overview of how to identify what types of data analysis tools to use for a project, along with basic “DIY” instructions. We will discuss the most common analysis tools for describing your data and performing significance tests (ANOVA, Regression, Correlation, Chi-square, etc), and how they should be selected based on the type of data and the type of research question you have. We will spend the first hour outlining “what analysis to use when” and the second hour going through examples in SPSS software.

**Friday, September 27, 2013, 2-4 pm**

Social Science Research Commons Grand Hall

Woodburn Hall 200
