

The Northwest Indiana COINCIDENT INDEX

January 2015 Release

In January the Northwest Indiana Coincident Index fell 0.1 points. A decrease in employment, especially in the construction sector, due to the unusually poor weather in January was the main contributing factor.

The Northwest Indiana Coincident Index measures the current pulse of the economy in Northwest Indiana. The current value of the Index and a six-month forecast is released every month in a brief update. Analysis and further details are released in quarterly summaries.
