IUScholarWorks

Ketterson / Nolan Research Group Collection

This document is part of a collection that serves two purposes. First it is a public archive for data and documents resulting from evolutionary, ecological, and behavioral research conducted by the Ketterson-Nolan research group. The focus of the research is an abundant North American songbird, the dark-eyed junco, *Junco hyemalis*, and the primary sources of support have been the National Science Foundation and Indiana University. The research was conducted in collaboration with numerous colleagues and students, and the objective of this site is to preserve not only the published products of the research, but also to document the organization and people that led to the published findings. Second it is a repository for the works of Val Nolan Jr., who studied songbirds in addition to the junco: in particular the prairie warbler, *Dendroica discolor*. This site was originally compiled and organized by Eric Snajdr, Nicole Gerlach, and Ellen Ketterson.

Context Statement
This document was generated as part of a long-term biological research project on a songbird, the dark-eyed junco, conducted by the Ketterson/Nolan research group at Indiana University. For more information, please see IUScholarWorks (https://scholarworks.iu.edu/dspace/handle/2022/7911).

License/Disclaimer Statement
By downloading this document or using any information contained therein, you agree to the license terms outlined at https://scholarworks.iu.edu/dspace/handle/2022/15260, which explain terms governing use, creation of derivative research, and requirements for citing the document.

Nest location Just below condos on Rd ♂ I. D. White/Lt Blue O's B/orng/Red-6?

Date Found 6/31/85 Status when found ♀ building

Expected Hatching Date 6/17 Expected fledging Date

Junco eggs @ onset of incubation # Young hatched

Date at onset of incubation 6

Date	Status
6/1	♀ here yesterday - 2 ♂♂ fighting over her - she started nest right on teen boarder - one ♂ mated. Nest @ Grass stage today.
6/4	Yesterday she had J-egg!. Measured & left it. Today had new J. plus new CB egg Marked CB egg 1, took 2 J-eggs & put in an X CB egg. ♀ appeared to be incubating - eggs were warm.
6/5	Oh shit - no new J. egg - same 2 CB eggs - 1 X & 1 new. 3 birds chase all around here. left as was.
6/6	Oh boy - pretty failed. only the 1 CB egg - all covered w/ sticky goop from ½-rotten X CB egg - egg itself gone. I cleaned up things & put in a new X CB egg. No ♀ around, but ♂ here & there - sings some -
6/7	Pretty failed - same 2 CB eggs - I took them -

Date Found 6/15/85 - By EK

Status when found Young hatching!

Expected Hatching Date 6/15

Expected fledging Date ~6/26

Junco eggs @ onset of incubation 4?

Young hatched 3

Date at onset of incubation ~6/4

Date	Status
6/15	El was informed by workfolks about nest - just pipping ~~eater~~ P.M. by late afternoon I looked briefly in - saw no eggs.
6/16	- V & E caught ♀ in hoop net today & bled. But oh boy - They took plant away for a wedding reception today for ~ 5 hrs - it was O.K. - they put it back - Parents came back
6/17	All OK - weighed - kids seem OK.
6/18	all OK.
6/19	OK.
6/20	O.K. ♂ feeds - Dropped none
6/21	O.K. none still alive - but will die - starved. V & E - put biggest from WVN27 in - so there'll be ~~4~~ 3 still. it's smallest - R-C.
6/22	- well - Now finally gone. I banded other 3. 2 Day 7, 1 day 5.
6/23	OK No - only 2 oldest in nest - Orng/Red kid found dead near railing on porch
6/24	2 yg still ok.
6/25	2 yg still ok.
6/26	2 yg still OK
6/27	Kids forced fledged by us - ♀ bled. El saw kids 12 hrs after fledging!
6/28	Saw 1 kid today w/ ♀ + ♂, but didn't look for other one.
6/29	Saw both fledglings w/ ♀ + ♂ just south of Hotel & west of B.K. Rd.
~~7/1~~ 7/9	El. Saw family - no telling # of young -
7/13	Not seen!
7/17	Laura says she saw ♀ (colors?) - responded to screams
7/18	Saw both parents up B.K. Rd - only Grn/Blck kid seen. Flys well. We think only this one made it.
7/10	Saw them ~ late p.m. - very dark, but saw 1 young - parents chipped.
7/16	El saw ♀ w/ the fledgling up @ blck cylander tank. some chips.
7/12	Saw the Grn/Blck kid w/ ♀ + ♂ same place - almost feeds itself. It is officially
7/13	Indep.
7/14	♀ still feeds kid.
7/15	Laura chased ♀ + kid around for 1½ hrs this a.m. still feeds
7/16	♀ still feeds! ♀ not seen @ all. Fledgling follows Irene, who does not feed it.

Junco eggs @ onset of incubation 4 — # Young hatched 4

Date at onset of incubation 7/3

Date	Status
6/29	Found ♀ building 6/26 - Lined today.
6/30	Egg1: measured it.
7/1	Egg2. KB measured it.
7/2	Shit forgot to check Egg 3.
7/3	Okay if eggs (meas. 3 + 4)
7/8	♀ on
7/12	All ok. ♀ seen on porch of Valley View - chipped a bit.
7/13	Unhatched.
7/14	3 hatched. VT El. unsuccessful in catching.
7/15	Laura & Melissa watched for 30min. Egg 4 hatched.
7/16	O.K R-R Fellout of nest - dead on porch. Red O white O Blue ♂ showed up!!
7/17	" "
7/18	O.K.
7/19	" " None very small. *KB & Melissa watched nest.
7/20	~~KBa~~ watched, reweighed. Saw H. 2 ♂ as replacement ♂.
7/21	~~Eldon~~ banded - The smallest (none) ~~Had~~ was found alive on porch below. Laura Duct-taped nest up; it made a perch for ♀ to feed from. 'None' was cold when we found it - after warming it, it revived & we banded it & put it back into the nest
7/22	KB. did nest watch, Repla. ♂ did not feed but came to nest & perched beside it noticed B. Swallows swooping very close to nest, then noticed 1 yng laying dead on porch - seemed to have been dead quite some time (at least several hours). am speculating that it may have died from fall yesterday & ♀ removed it. Hotel ♀ original ♂ got out of live cage on Bold Knob trail; he was seen at nest site in early evening.
7/23	LW+LZ tried to catch Hotel ♀ original ♂ in a.m. with net, live ♂ & recorded songs; no response from ♂. Saw him feed at nest. LW+LZ tried baited cage later on in the afternoon; succeeded in catching ♂ in early evening. He was put in the aviary.
7/25	2 fledglings still in nest - being fed by ♀ & ♂. Kids still in ~1900 - day 11. Did not fledge today - wet & Rainy.
7/26	♀ & ♂ fledged kids. KB saw them Both at 1700.
7/27	Family on hill above stable. Saw 1 [illegible] take long flight down hill, turn round in air & come back to land on hill. Repl. ♂ here - chips & sings
7/28	Laura saw Both kids!! This was on maple near Valley View. Hotel 2 ♂ chipped, was there

Date Found 5/25/85 Status when found ♀ incubating - 4 fresh eggs

Expected Hatching Date ~~6/4~~ Expected fledging Date 6/~~10~~-15-16

Junco eggs @ onset of incubation 4 # Young hatched 2

Date at onset of incubation ~5/24

Date	Status
5/25	Adrianne found ♀ chipping - Found her on 4 fresh eggs.
5/26	all OK.
5/27	No check
5/28	O.K Val Caught Pr. in D-trap - banded.
5/29	O.K.
5/30	no check
5/31	all O.K
6/2	" "
6/3	♀ on. one egg has puncture - looks like long pip.
6/4	2 young hatched this a.m. - one egg a runt - we could see thru it - just clearish fluid - we could see air bubbles that moved around under the surface. Took it. 3rd egg unpipped.
6/5	still only 2 hatched. El + Val Caught parents + bled + weighed this a.m. Big rainstorms - El took 2 of the biggest young from 3-Lav's nest + put them in ST24's - Kept ♂?
6/6	Kids ok. Double Green ♂ hangs around.
6/7	Krissy watched nest this a.m. very foggy. D Green hangs around. only 3 young today @ ~ 1400. Both gone.
6/8	all OK
6/9	" "
6/10	Ok - Banded 2/3 Young.
6/11	Ok Day 7 - banded None.
6/12	O.K. D Green hangs out.
6/13	O.K. Day 9. K3 watched nest.
6/14	On Fledged Lake afternoon - We caught all 3 + ♀, too. Kept 2 kids so that El can catch + bleed in a.m. Both ST12 ♂ + D. green chipped + defended. Caught D. Green.
6/15	El + Val held 2 young overnite - one got weak - so she sobed young from WVN-Slav she put out SOD green-R, Yell/Brk Blue-C instead of SO red/orange-R, Yell/Blk-L. The one left was still there - Eig said he saw a ♂ feed these too. (!)
6/16	- Hmm - Not conclusive.
6/17	No Sign - D Grn ♂ acts like nothing anywhere.

Young hatched

Date at onset of incubation 5/10

Date	Status
5/8	Just hunting around on downhill slope - saw the pair here yesterday. 2 Fresh eggs. I replaced them w/ a CB & X-J-egg.
5/9	3rd egg. Replaced it w/ dummy J-egg. Got a better look @ the ♀ today - I think she is the WVS37 ♀ w/out a Green band over others on the Rt. leg.
5/10	♀ on - 4th egg. Measured it & returned her 3. She is WVS37 ♀ - has all bands.
5/11	♀ off - eggs warm.
5/12	Oh dear - very wired. ♀ is now building a nest X the Rd. Her 4 eggs were fine - cold, & a snail was on them. (!) ☹
5/13	All cold - Took eggs - The nest she was working on yesterday - Not Progressed

6/1	" "
6/4	Oh! failed! only 1 nice greenish egg left - cold. I took it.

Junco log Sheet - Nests

Nest # WP58-R3 ♀ I. D. Yellow-L, Lt Grn O orng O, Dk Blue-R

Nest location on Rock face bank - near WP58-R ♂ I. D. Orng/Blue O-R, 3 Orng/Blue-L

Date Found 6/6/85 Status when found ♀ building

Expected Hatching Date ~6/23 Expected fledging Date

Junco eggs @ onset of incubation 4 # Young hatched

Date at onset of incubation 6/3

Date	Status
6/6	♂ chipped @ me - ♀ came & chipped - glanced in - looks like an old
6/7	unfinished nest is being worked on. Found the WP58-R nest that looks as if it has been relined w/ coarse grass.
6/8	Has hair - looks good.
6/9	Oh - an egg! Xchanged it for X CB egg.
6/10	Egg 2 - I put in X J. egg
6/11	Egg 3 - ♀ on early this a.m. Put in Dummy J-egg & took her 3rd.
6/12	Egg 4 - ♀ on. Gave her eggs back - took out 3 obs. Did not measure 4th rain
6/13	♀ on - measured 4th egg.
6/14	Failed - nest empty. I think I found new spot.

# of junco eggs at onset of incubation 3

Date	Status
7/7	E.K. & K.B. saw it - progressed to grass stage. Pr. chipped w them here yesterday.
7/8	found another nest just south of one E.K. + I found - also grass stage. Put green leaves in both nests.
7/9	No sign of either ♂ or ♀, both leaves shriveled :(- looked on uphill & downhill banks through gulley - found nothing.
7/11	K.B. saw pr. in gulley - got chipped w. Saw WP60 ♂ w/ WP58 ♀
7/14	looked for pr - Saw ♀ only - heard alot of jimes & possibly ♂ feeding to - may be here??
7/17	- K.B. Found nest - in gulley Yesterday - 3 chalky eggs - Unhatched today.
7/18	Unhatched.
7/19	"
7/21	still unhatched
7/22	Still unhatched.
7/23	both adults chipping by nest, one went for a chipmunk, 3 still eggs
7/24	still unhatched 3 eggs, but one is possibly pipped
7/25	didn't check :(
7/26	all eggs were hatched, one looks DAY 0 Today, the other 2 DAY 1 Today. V & El. caught & weighed ♀. Took ♂.
7/27	O.K.
7/28	ok. KB did watch & weighed kids. WP 61 ♂ & ♂ nearby.
7/29	all ok K.B weighed, ♀ chipping at me.
7/30	all ok, K.B weighed.
7/31	K.B did nest watch. all ok. put ID colors on oney. DAY 6
8/1	KB Banded & weighed ~~Red~~-L=(yel/Blk) has hurt Rt. leg, it has a funny bend on the tarsus & R-L holds leg close to itself - looks swollen a little :(- took tarsi meas. on left leg. Others all ok.
8/2	♀ accidently killed by rodent in net. K.B brought nest w/ young in.

Junco eggs @ onset of incubation 3? # Young hatched 3

Date at onset of incubation 5/5

Date	Status
5/12	Found ♀ on 3 J-eggs. They chipped @ me here yesterday.
5/13	Still eggs.
5/14	" "
5/15	" "
5/16	all 3 hatched - last one this P.M. No time to catch.
5/17	Caught ♀ & ♂ - Banded ♂ & weighed ♀. She was ~1 g. lighter today than @ beginning of incubtn, when I caught her 5/7. Later P.M. R-Rt was dead in nest, & other 2 kids very weak.
5/18	Deserted. 2 Young remain in nest - ice cold. I thought dead, but they were alive. We took them & warmed them. None came back, but R=L died. Put "None" into WVN21 (hatched today) & made it "Both".
