

An Analysis of Northern Indiana's Population in 1850

*Elfrieda Lang**

Statistics have been sought after in the past by only a few scholars, and in fact avoided by others. In recent years a number of historians have been more interested in social history than in the political story and have gleaned the original census returns to produce their narrative. Among some of those who have been actively engaged in working with the census are Frank L. Owsley of Alabama and his student, Chase C. Mooney of Indiana University, who has completed an extensive study on slaves in Tennessee. Another student of the census, Hildegard Binder Johnson of Minnesota, has won wide acclaim for her scholarly articles on a number of Middle Western States and especially on Germans. And more recently, Barnes F. Lathrop has completed a study of Texas. The authors of most of the studies that have been published or are now in progress have used or are using the sampling method to arrive at their conclusions.

The most detailed study now available for any state was completed in 1950. This research covers twenty-one counties in Indiana north of the Wabash River. Because of the time element in reading microfilm and compiling statistics, it may require another ten years before an exhaustive account can be given for the entire state of Indiana.

Not until 1830 was a census taken in northern Indiana. At that time there were 3,380 inhabitants, exclusive of Indians, living in this region. By 1840 the number totaled 65,897. During the next decade the population had increased to 165,286, representing thirty states and twenty-six foreign countries. Some of those individuals may have migrated to this Hoosier wilderness to improve their financial status, while others may have been imbued by the spirit of adventure.

* Elfrieda Lang is a research associate and assistant editor of the *Indiana Magazine of History*. These statistics are the heart of the Ph.D. dissertation completed at Indiana University in 1950 under the direction of John D. Barnhart. The tables which follow were compiled from the Original Returns of the Seventh United States Census, 1850, Indiana. A copy of this census in microfilm is on file in the Documents Division of the Indiana University Library, Bloomington, Indiana. It should be noted that the boundaries of the counties in this study were those of 1850 and not as of today. For changes of county boundaries see, George Pence and Nellie C. Armstrong, *Indiana Boundaries, Territory, State, and County* (Indianapolis, 1933).

Many on the frontier found there an opportunity to develop talents which might have remained dormant in the state or country of their birth.

By the time the 1830 census was taken only four northern counties were settled. Allen, Elkhart, and St. Joseph were border counties, and Cass County in the interior had proved the more popular area for settlement. Ten years later twenty-one counties north of the Wabash River in the Hoosier State had been populated. La Porte County with over eight thousand inhabitants was the more densely settled. In 1850, however, Allen County had more people living within its borders than any other county in the region.

While the increase in population in these northern counties is of interest, the more noteworthy factor may be the nativity of those inhabitants who were living there at the time of the seventh census. Over sixty-three per cent had been born in the North Central States and in all probability were the children of parents who had migrated from other sections and from foreign countries. A further analysis of the above percentage indicated that more than thirty-five per cent were native Hoosiers. Six counties had more Ohioans than Indianans. Of this number four: Kosciusko, Noble, Starke, and Whitley, were interior counties; and only two, Steuben and De Kalb, bordered Ohio. That immigration from the Buckeye State to this area was of more recent date than to other counties in northern Indiana is substantiated by the fact that the younger children had been born in Ohio.

After 1830 the National Road no longer served as a dividing line for the Southerners, who now began to swing their axes to clear areas for settlement in the region north of the Wabash River. In the next twenty years approximately twelve thousand had settled in northern Indiana, representing thirteen states from the South. Fifty per cent of this number were Virginians. Kentuckians and Marylanders were also well represented. Miami and Wabash counties were more favored for settlement by Southerners. As a rule, immigrants from the South reached Indiana by traveling through Ohio. Then, too, there were those who lived for a number of years in southern Indiana before removing to the area north of the Wabash River. Children were born in Ohio and in counties south of the National Road.

Slightly less than thirty-two thousand came from the Middle Atlantic States. Over fifteen thousand were natives of

Pennsylvania with approximately sixteen hundred choosing Elkhart County. Since the natives of the Keystone State surpassed the number of New Yorkers in the interior counties, it is likely that the Pennsylvanians may have traveled on such a central route as the National Road which linked with the Michigan Road at Indianapolis, and then gradually distributed themselves on either side of the latter highway. That such a route was probably followed is further substantiated by the fact that many children of Pennsylvanians were born in Ohio. On the other hand, more than fourteen thousand came from New York, of which two thousand had settled in La Porte County. With only a few exceptions the counties along the lake and the Michigan border were more favored by natives from the Empire State than the interior counties. Except for approximately twenty-two hundred citizens from Delaware and New Jersey, the immigrants from New York and Pennsylvania comprised the entire population of the Middle Atlantic States who moved into northern Indiana.

Among the native-born population about three per cent were New Englanders, who had left the rolling hills and rocky ledges for the open prairies and marshes of northern Indiana. La Porte and Steuben counties were the choice of the largest number of Yankees. There were more sons and daughter from Vermont than from any other New England State, although Connecticut and Massachusetts each were represented by slightly more than eleven hundred. The Yankees settled in larger numbers in the border counties, and as early as 1850 had to their credit the founding of Orland Academy in Steuben County, thus giving some indication of Yankee interest in higher education. John Stocker from the Green Mountain State did the spade work in this county and no doubt was responsible for luring New Englanders to the region. Another Yankee, Solon Robinson, who came from Connecticut, was the leading spirit in Lake County. In all likelihood the New England group made its entrance into Indiana by a northern route. Judging by the nativity of children, some Yankees came by way of Michigan and others lived for a number of years in Ohio after leaving the Wolverine State before settling in Indiana. A number of New Englanders and Southerners, as well as some foreigners, by-passed the Hoosier State for Illinois and lived there from five to ten years before retreating into Indiana.

Interestingly enough, the counties, which were popular with New Englanders were also the choice of natives from the Empire State. One may, therefore, conclude that many of the ancestors of New Yorkers were Yankees. Probably fifty per cent or more of the native New Yorkers who settled in northern Indiana were of New England extraction.

Approximately eleven thousand inhabitants of the total population were natives of foreign countries, and over a third of the entire alien population was concentrated in Allen County. Furthermore, the Germans made the most indelible impression of any group. Their numbers were more pronounced in Allen and Lake counties than those of all other aliens put together.

In 1850, there were 433 Negroes in northern Indiana, and about thirty per cent of this number were natives of the Southern States. The majority of them were living in Allen, Cass, and Whitley counties. Lake, Marshall, Pulaski, and Starke counties had no colored population. Approximately fifty-eight per cent of the Negroes were natives of the North Central States, to which their parents may have migrated from the Southern States. In all probability some of the colored people accompanied a master from the South to the Hoosier State and once on free soil continued in his employ or pursued some other occupation.

At the time of the 1850 census 110 Indians were living in northern Indiana. Of this number seven had settled in Cass County; five, in Marshall; eighty-three, in Miami; and fifteen, in Wabash. Four were born in Michigan, one each, in Ohio, Pennsylvania, and Virginia; and one hundred and two, in Indiana. The birthplace of one was unknown. One may assume that they had never become a part of an emigration trek or that if they had removed to a western state, at the time of the seventh census they had returned to their old stamping grounds.

In addition to the nativity of northern Indiana's population, the age distribution of the inhabitants is worthy of consideration. The largest number below twenty years were born in the North Central States, with the majority being natives of the Hoosier State. Hence, the parents in most cases were born in other states and foreign countries. Eighty-eight per cent of the New Englanders were above twenty and fifty-four per cent above forty. The Southerners ranked next with eighty-five per cent above twenty and forty-four per cent above forty,

and they in turn were followed by the natives from the Middle Atlantic States with seventy-three per cent above twenty and twenty-nine per cent above forty. While seventy-four per cent of the foreigners were above twenty, there were only twenty-seven per cent above forty in this group. Almost seventy-eight per cent of the Middle Westerners were below twenty years of age, but for the Hoosiers it was ninety-three per cent in the same range.

Although the Hoosiers constituted over thirty-five per cent of the population in the region, it should be noted that the majority of them were below ten years of age. For this reason one might, therefore, conclude that the number of Indianans is not of any great significance, especially since the parents themselves had come from New England, from the South, from the Middle Atlantic States, or from foreign countries. It was, after all, the older generation that made the furrow which the children followed.

Population of Northern Indiana, 1830-1850
