The Graduate Research Journal is a multidisciplinary journal specifically for graduate students. The goal of the journal is to publish the best research and/or critical graduate work produced at IU South Bend every year.

We provide opportunities for academic and professional experience through the peer review and editing process done by graduate students, as well as marketing and advertising experience through the promotion of submissions and distribution.

As a multidisciplinary journal, participants have the opportunity to engage with ideas and work outside of their fields, which promotes the exchange of perspectives among academic disciplines within the campus.
